## Integration of Current Curriculum with Technology

There is significant pressure for teachers to focus on high test scores and to narrow the achievement gap. Some teachers have resisted additional resources in the classroom, as it often seems an added responsibility and a hindrance rather than an asset. Integrating your current curriculum with engaging technologies has never been easier and can result in time savings and increased student performance.

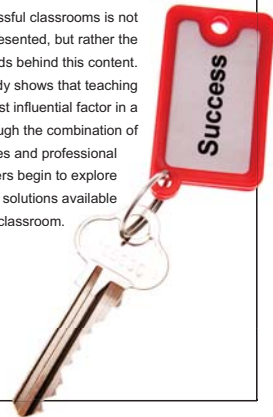

## Creating a Fun and Interactive Classroom

Teachers spend significant time and energy attempting to create excitement among their students on a daily basis. Their ultimate goal is for students to achieve a high level of understanding for the specific grade level standards; however creating engaging lessons is essential for mastery. In today's world of diverse students, it is increasingly difficult to create dynamic, satisfying and successful lesson plans. Professional development offered at CIM Technology Solutions can hold the key to unlocking these lesson plans on a daily basis.

## Best Practices & Methodology

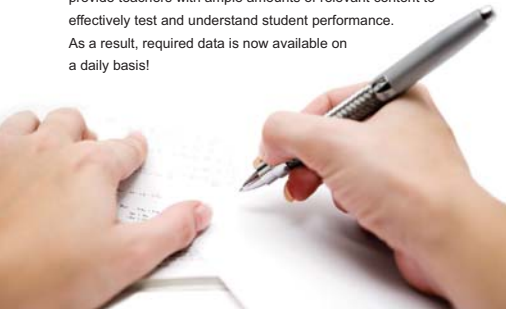

The key to successful classrooms is not merely the content presented, but rather the teaching methods behind this content. Marzano's study shows that teaching strategies are the most influential factor in a child's learning. Through the combination of content, best practices and professional development, teachers begin to explore how to best use the solutions available to them in their classroom.

## Creating Standard Aligned Lessons and Assessments

New solutions provide the ability for teachers to compile meaningful questions and develop final assessments to enhance lessons. ExamView software is the bridge that allows teachers to easily conduct otherwise daunting tasks with the click of a few buttons. ExamView question banks provide teachers with ample amounts of relevant content to effectively test and understand student performance. As a result, required data is now available on a daily basis!

## Meeting the Needs of Individual Students

With the current emphasis in today's classrooms on teaching to test scores, it is increasingly difficult to provide adequate instruction to all children on a meaningful, individual level. Creating engaging lesson plans that achieve group goals while reaching diverse learners is paramount.

## Become a 21st Century Classroom

"The illiterate of the 21st century will not be those who cannot read or write, but those who cannot learn, unlearn, and relearn." -Alvin Toffler

Every facet of our social and economic environments have gone digital. A child is able to navigate Windows with a mouse before they can write their name. Why are tomorrow's leaders still not receiving a 21st century education? There is unrealized value in connecting with our children the same way the rest of the world reaches them. As educators, it is our goal to meet today's children where they are most likely to learn.
